

About Endera

Endera is an established SaaS product company that is rapidly expanding person-centric product across new channels while launching new products that are direct to consumer. Endera is a mature software product company that's never lost our lean start-up culture. We have achieved high levels of security compliance with an advanced software delivery capability. We are scaling out our design, development, delivery, and assurance operations with a second office that will be located in the downtown Sarasota. We are seeking energetic self-starters who want to be part of something special.

Position Description

As front-end developer for Endera you are team-oriented, modern JavaScript development specialist with a focus on customer facing experiences. You build JavaScript applications that include unit testing and code quality, and you are intimately familiar with cross browser compatibility issues. You keep current with the latest framework and know how to deliver solid applications into production environments. You're also team-oriented and take a collaborative approach to working with distributed teams. You are articulate, well spoken, and capable of working with the Agile stakeholders on requirements, user stories, Agile sprint meetings, as well working with development team during requirement phase, design meetings, code reviews, implementation and testing.

Responsibilities

- Develop, test, and deploy features within a specified javascript framework
- Participate in code reviews and sprint ceremonies (planning, standups, release, and retrospectives)
- Work with back-end developers in a remote office location (same time zone)
- Assist QA specialists, product owner, and user experience with elaboration of user stories, acceptance criteria and design decisions.
- Turn designs & Concepts into experiences that come HTML, CSS and JavaScript
- Advocate standard & consistency of interaction design while fostering consensus of customer-centric intersection between Design, Usability, Content, Business and Marketing views

Required Skills

- Comprehensive understanding of Single Page Applications complimentary JavaScript web frameworks
- Ability to consume APIs that are Rest/JSON based
- Ability to optimize code for maximum speed and scalability
- Good Understanding of Browsers, Rendering, and Optimization
- Experience with or exposure to Material Design principles

Desired Skills

- Experience with React and Redux

- Experience in the full design and development lifecycle with an emphasis on designing intuitive and delightful user experiences
- Excellent interpersonal, collaboration, analytical and problem-solving skills
- Experience working on teams with continuous integration, continuous testing, and continuous delivery in their DNA.
